

Aakhi — Retinal Image Analysis Report

Phase 1 Report (DR, OD/OC, Lesions, Glaucoma)

Patient Name	Test Patient	Doctor	Dr. Test Doctor
Age	45	Date	08 May 2026, 10:12 AM
Gender	Male	Eye Examined	Right Eye (OD)
Report ID	7F4A2ECB	Institution	IIT Bhubaneswar — Eye AI Lab

Fundus Image

Original fundus photograph

DR Grading

Classification: **Mild DR** (Level 1/4)

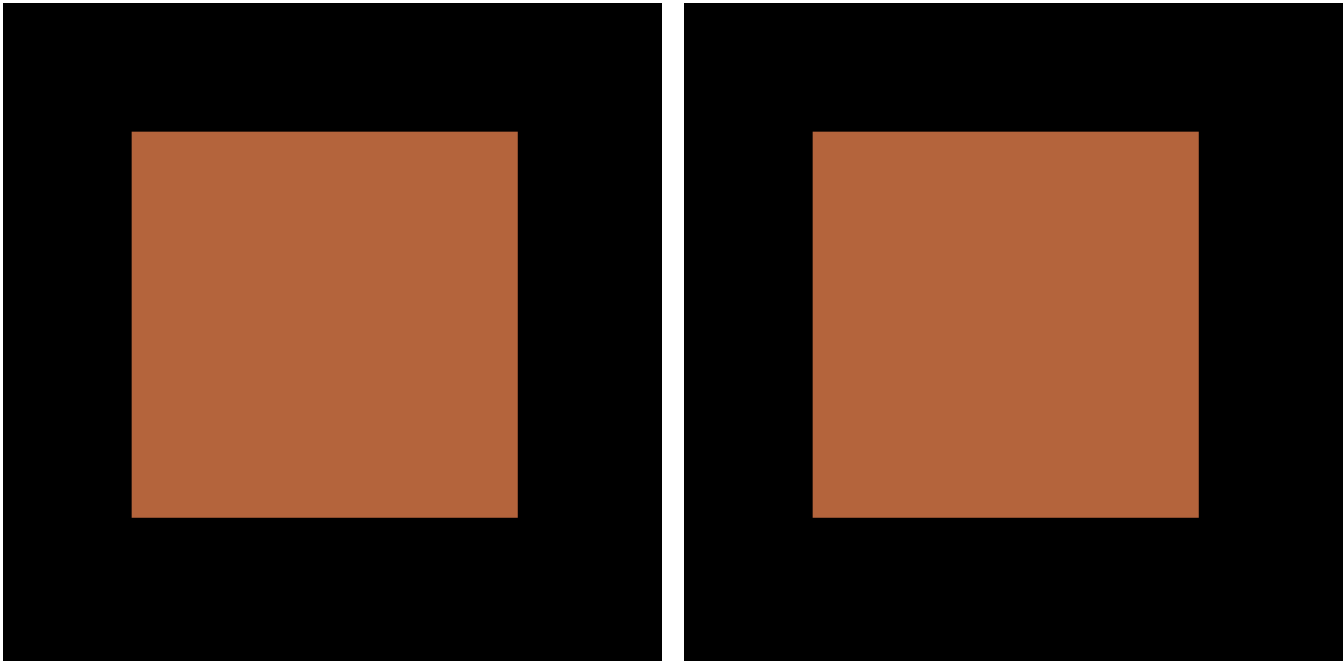

Clinical Description: Mild non-proliferative DR. Presence of at least one microaneurysm. Regular monitoring recommended.

DR Severity Level	1 / 4 — Mild DR
Grading Scale	ETDRS / International Clinical DR Disease Severity Scale
Model	EfficientNet-B6 (fine-tuned, 5-class)

Recommended Action	Follow-up in 6–12 months. Optimise glycaemic and blood pressure control.
--------------------	--

Optic Disc / Cup Segmentation

Color Key: Green=Optic Disc | Blue=Optic Cup | Quadrant Analysis (S=Superior, I=Inferior, N=Nasal, T=Temporal)

Segmentation (Green=Disc, Blue=Cup)

Overlay with quadrant lines (S/I/N/T)

Morphometric Measurements

Vertical CDR (vCDR)	0.450 — CDR within normal limits (< 0.5). Low suspicion for glaucomatous optic neuropathy.
Horizontal CDR (hCDR)	0.400
Area-based CDR	0.380
Optic Disc — Vertical Ø	400 px
Optic Disc — Horizontal Ø	420 px
Optic Cup — Vertical Ø	180 px
Optic Cup — Horizontal Ø	168 px
Disc Area (px²)	125664
Cup Area (px²)	25447

Neuroretinal Rim Analysis — ISNT Rule

Normal ISNT rule: Inferior rim Superior Nasal Temporal

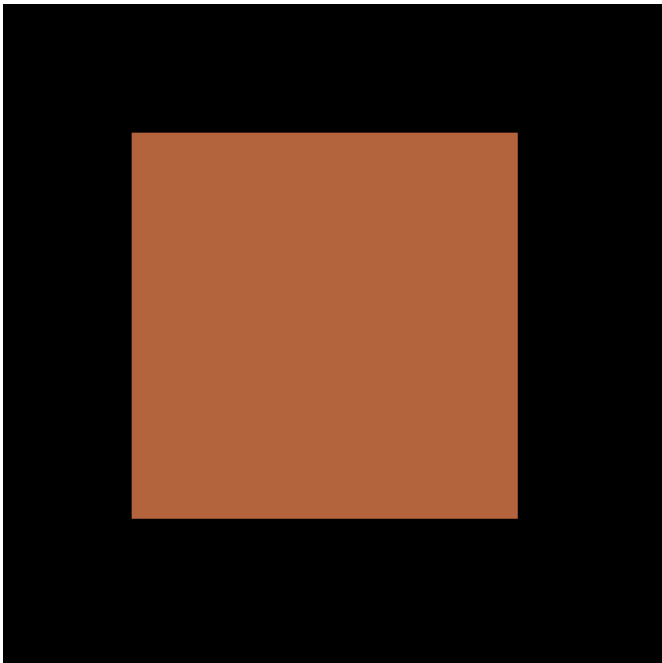

Superior Rim	28.2% of total rim area
Inferior Rim	29.1% of total rim area
Nasal Rim	21.4% of total rim area
Temporal Rim	21.3% of total rim area
ISNT Rule	Normal (ISNT rule satisfied)

Lesion Detection

Color Key: Red=Hard Exudates | Green=Hemorrhages | Blue=Microaneurysms | Yellow=Soft Exudates

Lesion segmentation (colour-coded by type)

Overlay on original fundus

Detected Lesion Areas (pixels²)

Hard Exudates (HE)	500 px ² — Lipid deposits from leaking vessels
Haemorrhages (HEM)	200 px ² — Intraretinal bleeding
Microaneurysms (MA)	100 px ² — Small capillary bulges
Soft Exudates (SE)	50 px ² — Cotton-wool spots
Model	UNet + FIAM attention (IDRiD dataset)

Glaucoma Grading

Glaucoma Severity Grade: No Glaucoma

Clinical Interpretation: No evidence of glaucomatous optic neuropathy.

Model	SE-ResNet101 (3-class glaucoma grading)
Classification	No Glaucoma
Corroborating CDR	vCDR = 0.450 (suspicion threshold: 0.65)
ISNT Rule Violation	No

Clinical Summary

DR Grading	Mild DR (Level 1/4)
Glaucoma Grading	No Glaucoma
Vertical CDR	0.450 — Risk: Low
ISNT Rule	Normal
Lesion Load	HE: 500 HEM: 200 SE: 50 px ²

Recommendations

- DR follow-up: Follow-up in 6–12 months. Optimise glycaemic and blood pressure control.

Report ID: 7F4A2ECB | 08 May 2026, 10:12 AM

Generated by Aakhi Retinal AI

This report is generated by the Aakhi AI system for clinical reference only. All findings must be verified by a qualified ophthalmologist before treatment decisions.

रंग कुंजी: लाल=कठोर एक्स्युडेट | हरिवा=रक्तस्राव | नळि=मायक्रोअन्युरझिम | पविळा=मृदू एक्स्युडेट

Detected Lesion Areas (pixels²)

Hard Exudates (HE)	500 px ² — Lipid deposits from leaking vessels
Haemorrhages (HEM)	200 px ² — Intraretinal bleeding
Microaneurysms (MA)	100 px ² — Small capillary bulges
Soft Exudates (SE)	50 px ² — Cotton-wool spots
Model	UNet + FIAM attention (IDRiD dataset)

काचबटू ग्रेडिंग

Glaucoma Severity Grade: No Glaucoma

Clinical Interpretation: No evidence of glaucomatous optic neuropathy.

Model	SE-ResNet101 (3-class glaucoma grading)
Classification	No Glaucoma
Corroborating CDR	vCDR = 0.450 (suspicion threshold: 0.65)
ISNT Rule Violation	No

नैदानिक सारांश

DR Grading	Mild DR (Level 1/4)
Glaucoma Grading	No Glaucoma
Vertical CDR	0.450 — Risk: Low
ISNT Rule	Normal
Lesion Load	HE: 500 HEM: 200 SE: 50 px ²

शफारसी

- DR follow-up: Follow-up in 6–12 months. Optimise glycaemic and blood pressure control.

Report ID: 7F4A2ECB | 08 May 2026, 10:12 AM

आकी रेटनिल द्वारे तयार

हा अहवाल केवळ नैदानिक संदर्भासाठी आकी प्रणालीद्वारे तयार केला आहे. उपचार निर्णय घेण्यापूर्वी सर्व नक्षिकांचा योग्य नेत्ररोग तज्ज्ञाद्वारे पडताळणी आवश्यक आहे.
